

Earth Class News

We have had another fun and busy week. We drew and tasted the fruits from Handa's surprise, the mango and pineapple were a hit, the passionfruit was not! We are very proud of the children for trying some unfamiliar foods.

Of course our plans changed when we had a snow day! We investigated the snow and ice, made a snowman and used lots of lovely vocabulary to describe the snow, 'crunchy, soft, fluffy...'

We decided to do an experiment to see if some water would freeze overnight. We used cold water in one tray and hot water in the other. Most children thought the hot water would not freeze overnight and were very surprised to find it frozen in the morning! We then investigated different ways to melt the ice. We brought a big piece of ice into class and observed how long it took to melt.

What a busy week!

We have learned the digraphs ch and th this week if you would like to practice them at home.

Have a lovely weekend!
